

14 May 2013

Zenith Aviation, Inc announced today the purchase of four additional computer-driven parts storage carousels from Alternative Handling Technologies out of Baltimore, Maryland. These automated units will be added to the 11 existing carousels and 2 vertical shuttles previously installed in the Zenith warehouse at the end of 2012, not to mention more than 10,000 square feet of traditional racking. The units are each nearly 100 feet long, 12 feet high, and together will add the equivalent of more than 4,200 traditional warehouse shelves, and provide capacity for up to 102,000 line items.

The carousels will arrive within the next three to four months and will be installed in Zenith's existing, fully-conditioned warehouse space. Zenith President, Mr. Robert Stanford, said of the purchase, "The investment we made to purchase these units is further evidence to our regional airline and corporate aviation clients of our commitment to provide aviation parts support long into the future. We now also make even greater parts storage capacity available to our domestic and international partners that count on Zenith for Forward Deployment parts storage and Third Party Logistics support. This technology allows us to keep our costs low and quality high in our ongoing efforts to remain an industry leading aircraft parts supplier."
